Biofloc technology (BFT) is as an environmentally friendly aquaculture technique based on in situ microorganism production. Fish and shrimp are grown in an intensive way (minimum of 300 g of biomass per square meter) with zero or minimum water exchange. In addition, continuously water movement in the entirely water column

The Aquaculture Program operates fifteen research-scale systems (six aquaponic and nine biofloc) as well as commercial-scale aquaponic and biofloc systems, a fry sex-reversal system, a recirculating system for fingerling rearing and a purge system. The program annually produces about 20,000 lbs. of tilapia and a variety of vegetables.
