Broca's area, or the Broca area, is a region in the frontal lobe of the dominant hemisphere, usually the left, of the brain with functions linked to speech production.

Language processing has been linked to Broca's area since Pierre Paul Broca reported impairments in two patients. They had lost the ability to

Broca's area is a region in the left hemisphere of the brain, specifically in the frontal gyrus of the frontal lobe. It is named after the French neurologist Paul Broca, who discovered it in 1861. Broca's area is responsible for the production of speech. Damage to this area can result in Broca's aphasia, a condition characterized by difficulty in producing speech, although the person's understanding of language remains intact. The deficit in language production is due to the damage to the neural pathways that control the muscles of the mouth and throat.

injuries occur? The brain sits suspended in fluid within the skull cavity. A sharp blow to the head can cause soft brain tissue to hit into the body skull bone. This impact can result in bruising, bleeding and inflammation of the brain. In some cases, an object may pierce the skull cavity and lodge into the brain.
