Engineering Mechanics Static And Dynamic

In mechanics static is referred to motion(velocity) which is either zero or constant. And dynamics is motion in which there is a particular acceleration so in dynamics velocity is always changing.

What is difference between static and dynamics in ...

Statics and dynamics concentrate on Newtonian or classical mechanics, which disregards the interactions of particles on a sub-atomic scale and the interactions involving relative speeds near the speed of light.

which deals with the analysis of loads and their effect on a system when its acceleration is zero or it is static equilibrium with the environment (relative motion is zero). The system may be in stationary or it is center of mass moves at constant velocity. However, term statics usually represent the analysis of loads on the stationary rigid body.
