Electromagnetic

Inertia

Field propulsion is the concept of spacecraft propulsion where no propellant is necessary but instead momentum of the spacecraft is changed by an interaction of the spacecraft with external force fields, such as gravitational and magnetic fields from stars and planets.

propellantless methods are the gravity assist maneuver or gravitational slingshot of a spacecraft accelerating at the expense of the momentum of the planet it orbits, through the gravitational field, or beam-powered propulsion using the radiation pressure of electromagnetic waves from a distant source like a laser.

Reactionless drive - Wikipedia

Experiments performed by independent research teams, suggesting that “propellantless” propulsion without external assistance is being achieved by means of electromagnetic inertia manipulation, are discussed here and compared within the framework of

competing theoretical formulations.

Inertia **Overview of Theories and Experiments on Electromagnetic ...**

And as he discovered in the autumn of 1989, if you accepted Einstein's view that inertia was inextricably linked to gravity, it opened up the possibility for propellantless propulsion.
