Bookmark File PDF Scheduling Irrigations When And How Much

Scheduling the last irrigation can reduce your pumping costs, improve harvest conditions, and in allocated groundwater areas, may save some irrigation water for next year. Usually by mid to late August, corn and soybeans have progressed enough in maturity that we have a good handle on how much water it will take to finish the crop out.

Chapter D9. Irrigation scheduling

Good irrigation scheduling means applying the right amount of water at the right time. In other words, making sure water is available when the crop needs it. Scheduling maximizes irrigation efficiency by minimizing runoff and percolation losses.
